## The Importance of Proper Posture

### Correct Alignment Leads to Better Health

Hope Bentley

Talk of good posture often generates images of women walking in a circle with books balanced on their heads or soldiers standing at attention. But good posture does not have to be rigid or ridiculous. In fact, far from ridiculous, it may be the key to good health.

According to Patrick Wroblewski, a Boulder, Colorado-based structural integration practitioner, "Good posture is a dynamic, working awareness of how gravity is coming down through the body." In other words, just as the body moves and changes throughout the day, so should posture.

Wroblewski explains that many people come in to his practice with complaints

misalignment, like standing with a hip cocked to one side. These common forms of less-than-perfect posture mean less-than-healthy consequences for the body.

### Does Posture Matter?

Ever feel low on energy? Get sick often? Experience headaches or digestive upset, like constipation or diarrhea? Feel less agile than you used to be? Your postural habits may be behind these symptoms.

Proper posture means the body is aligned so that all the muscles work as they were designed to. On the other hand, poor posture leads to inefficient

*"If a cluttered desk is a sign of a cluttered mind, of what than, is an empty desk?"*

-Albert Einstein

Working in front of a computer often leads to poor posture. Learn how to counteract the effects.

of lower back pain, and stiff necks and shoulders, most of which have a direct correlation to poor posture. If a person sits hunched in front of a computer screen all day, it's likely the head hovers towards the screen, the lower back has collapsed and the tail bone is supporting the weight, and legs are crossed or splayed. Bad standing posture includes the same hunching or lateral

movement, causing the muscles to have to do extra work. For instance, if the head isn't resting correctly on top of the neck and spine but hovers over the chest instead, the muscles at the back of the neck have to remain contracted to hold the head up. The results? Circulation becomes hindered, and oxygen and

nutrients have a hard time flowing through the body. Contracted muscles are less able to receive hydration and energy, and the tissue eventually becomes hard and fibrous. Eventually, muscles can pull bones out of alignment and cause serious problems and discomfort.

The bottom line is, poor posture can lead to muscular stress and fatigue, which can in turn lead to deficient circulation, compromised immunity, and poor lymph flow--which brings us back to low energy, frequent illness, headaches, digestive issues, and waning agility. So to answer our earlier question, yes, posture matters.

## Perfecting Posture

Correcting poor posture requires undoing the hardening, or fibrosis, of the muscles that have been habitually contracted, allowing them to relax and the bones to move back into place. Perhaps a simple concept, but not an easy task.

Wroblewski uses a combination of techniques to help correct posture: Swedish massage can help increase circulation and release chronically held areas. Deep tissue massage helps wake up the body and reverse some of the fibrosis in the tissue. And other bodywork techniques can further precipitate postural adjustments. He says, "Any kind of manipulation--craniosacral, acupressure--can cause an unwinding of tension and allow the body to release to the position in which it belongs."

Wroblewski also recommends movement education, an umbrella term that includes many types of bodywork, such as Alexander Technique, Feldenkrais Method, Hellerwork, and Trager Approach. Movement education advocates that one's body structure and movements can get stuck in habitual, unhealthy patterns. Movement education unwinds the patterns and teaches the body, as well as the mind, anew. This is done through a series of sessions where practitioners may use hands-on manipulation to teach the student different, more efficient ways to move, sit, stand, reach, bend, lift and walk. Ultimately, this balances the body and allows energy to move freely.

Movement education techniques may be

especially beneficial for people suffering from chronic difficulties, but also for anyone trying to achieve higher levels of physical and mental wellness.

According to Wroblewski, bodywork can induce a "neutral reprogramming," so that people can start from scratch and learn to recognize when good posture is breaking down. Then the necessary adjustments can be made.

## What's a Body To Do?

Desk jobs are notorious for wreaking havoc and causing postural impairments. Sitting for hours on end staring at a computer screen is likely one of the worst things you can do to your body. If you spend a lot of time sitting, make sure both feet are flat on the ground to give yourself a "tripod" of stability for the spine to rest on. Also, be sure to take frequent breaks, even if it just means walking to the window for a

moment, or getting a glass of water. And when standing, distribute weight evenly between both feet, and don't lock the knees or ankles.

Good posture takes practice, practice, practice and constant reminding. Wroblewski suggests leaving reminders in places where you will run into them throughout your day.

Old habits die hard, and this is true for muscular habits too. Be sure to schedule a series of massage treatments to help retrain the body. And talk to your practitioner about stretches and posture tips that can enhance your massage sessions. As you progress, you will notice less joint and muscle pain, fewer headaches, more energy, and possibly even stronger immunity and better digestion. Finally, you will develop a stronger awareness of your body and an increased sense of well being.

**Practice makes perfect! Good postural habits require repetition and practice, practice, practice.**

# Healthy Holidays

## Five Tips for the Natural Traveler

Planning a vacation or business trip? Consider packing a small kit of natural remedies before you go. Unfamiliar surroundings, unusual foods, and jet lag can make you vulnerable to viruses, stress, and gastrointestinal (GI) upset. Colorado Naturopathic Physician Michael Sutton suggests the following items:

### 1. GRAPEFRUIT SEED EXTRACT

This extract fights and prevents viruses and helps reduce symptoms of diarrhea and GI upset. It can even be used to decontaminate water (4-5 drops extract per quart of water). A few days before you leave, mix 4-5 drops with juice or water and drink it before bedtime, and continue for the duration of your trip. If you do catch a cold or flu, you can drink as much as 8-10 drops, 3-4 times a day.

### 2. AIRBORNE

Available in natural products stores, Airborne is an effervescent tablet containing herbs, antioxidants, vitamin C, and amino acids. It helps prevent and

fight colds, as well as motion sickness, when traveling.

### 3. MELATONIN

To ease jet lag, Sutton suggests leaving your watch set for the time zone from which you're departing. When your watch shows your normal bedtime, take 3-6mg of melatonin, then go to sleep to regulate yourself quickly and easily to the new time zone.

### 4. BACH FLOWER RESCUE REMEDY

To calm nerves and reduce anxiety, place a few drops of this remedy under your tongue when you're feeling anxious, or add 5-6 drops to your water bottle and drink throughout the day.

### 5. WATER

H<sub>2</sub>O is essential to healthy travel. Drink lots of water and avoid alcohol, as dehydration is a major cause of travel-related illness.

By packing a few natural remedies and paying attention to your body's needs, you'll be able to fully enjoy your trip.

Staying healthy is key to a good vacation.

# Massage for Seniors

## Bodywork Improves Quality of Life

Almost 35 million Americans are age 65 or older, and about 2,000 more reach this age every day. As the U.S. demographic shifts to an older population, it's important to find ways of helping our elders maintain their health and vitality. Massage for seniors is gaining importance as an alternative therapy to increase quality of life, and many massage therapists are getting special training to better serve this growing population.

### SENIORS' SPECIAL NEEDS

While similar in technique to other forms of massage, geriatric massage considers the special needs of the elderly. The specialty trained practitioner knows about positioning for greatest comfort and will often have

the client rest in the same position for the entire massage. Mobility challenges may dictate the massage be done in a bed or wheelchair. The therapist may also work both sides of the body at the same time to enhance body awareness, or only work hands and feet, if the client prefers. Sessions may be limited to 30 to 45 minutes, as older clients often do better with shorter, more frequent, massages.

The geriatric massage therapist is aware of health issues associated with aging and how to safely work with this type of client and with associated physicians. Consequently, the practitioner is able to individualize the massage service based on the client's health, mobility, and comfort level.

### BENEFITS OF GERIATRIC MASSAGE

A recent study conducted at the Weaver's Tale Retreat Center in Oregon looked at the effects of massage for elderly clients. The results of the two-year study showed that participants experienced a decrease in breathing rate of 50 percent and an improvement in range of motion, posture, body awareness, skin color, and muscle tone. Furthermore, it is well documented that caring touch benefits emotional well-being in seniors -- a population at greater risk of suffering from depression.

Massage therapy can add to the quality of a senior's life, both physically and emotionally. Consider booking a session for someone you love, and make a difference in their life.

HELLO EVERYBODY,

Our beautiful Fall weather is about to change to our cooler, snowier year end. Soon it will be time to start shopping for the Holidays.

WITH MY COMPLIMENTS ENJOY \$10 OFF on your next 1 HOUR MASSAGE THERAPY treatment, or when you purchase a 1 hour M.T. GIFT CERTIFICATE at the MIND and BODY CONNECTION by PANNI before DECEMBER 24th 2007. A PERFECT HOLIDAY GIFT IDEA. Please print (on line) or cut out this coupon. One coupon/person.

ATTENTION all PREFERRED CARE members. Your Tri-Vantage policy (HEALTHY ALTERNATIVES and ACTIVE LIFESTYLES) entitles you for 12 massage therapy treatments (any length) a year with Panni Speirs MS., L.M.T at a 50 % DISCOUNT.

RARES Members and 90.1 Jazz Radio Station Members you always receive 10% discount with your valid membership cards.

HAVE A HAPPY AND HEALTHY DAY!

Panni
